## **ACKNOWLEDGEMENT**

I wish to express my deep sense of gratitude and honour towards the faculty for giving us a chance and platform to work on such projects.

I also wish to thank everyone in the organization that helped me during project development time to time.

I also express my honour and gratitude to **Prof. Swapnil Goje** and constant encouragement for completing my project work successfully.

I also want to thank **Dr. C. H. Patil** for constant encouragement and help for completing my project work successfully.

## **Introduction**

The system will help the customers by providing a simple user interactive interface for renting a car through online mode which will save their time and money. User can save his overhead expenditure for buying costly cars by just renting it from us. If a person goes on a trip only once or twice a year it's a good option to rent a luxurious car from us rather than investing in new one. It's a good option for people who need car only for family trip and also for the college students.

## **Existing System**

1. An existing system can provide manually paper work.
2. The user has to go in the office where user can get the car on rent and book their car.
3. In the existing system you cannot provide feedback of the user to the admin online.

## **NEED FOR NEW SYSTEM**

1. The new system is totally computerized system.
2. A new system provides features like time efficiency to show car details, user profiles and whatever the customer will give the feedback to the admin.
3. This system provides tourism and travelling facilities.
4. An inquiry is easily done by user in the system.
5. It is the most software application for managing online car rental business.

## **Modules Used**

- **Admin :**

Admin can add a car, manage booking car and rent and also view feedback and enquiry.

- **User :**

User can view information of available car, booking car, easily get the car on rent and also give feedback and can enquiry.

## **MODULE SPECIFICATION**

### **➤ User**

- View Available Cars:**

It is a system design especially for large, premium and small car rental business. The user can view Available cars and user can book for that car.

- Booking Car:**

The user can view Available cars and user can book for that car.

- Easily Get the Car on rent:**

The Customer can easily get the car whenever they need to on the rent with use of this system.

- Give Feedback:**

The customer will give the feedback to the admin.

- Enquiry:**

The inquiry can easily do by user.

### **➤ Admin**

- Dashboard:**

In this section admin can view the overview of the carrental (Like total vehicles, total booking, brands enquiry)

- Vehicle Brand:**

Admin can create/edit/delete vehicle brands

- Vehicles:**

The Admin can add the car so that The user can see the available cars and book the car.

Admin can also edit and delete the cars.

- Bookings:**

Admin can manage the bookings (confirm and cancel the booking)

- Manage testimonials:**

Admin can manage the testimonials (Active and Inactive the testimonials).

- **Manage Contact us query:**  
Admin can manage Contact us query.
- **View Feedback:**  
The admin easily view the feedbacks and solve the query.
- **Registered users:**  
Admin can view the registered users.
- **Manage pages:**  
Admin can update the pages data information.
- **Contact info:**  
Admin can update the contact info.
- **Manage Subscribers:**  
Admin can manage subscribers.

## **Fact Gathering Study**

The fact gathering technique is used to find out the requirement of the system. The technique used are as follow: -

- Questionery
- Record review

### **• Questionery:**

By this technique we came to know about the system and what they need. This help to understand all the process, which occurs in the system. They try to help up by giving answer regarding our question and all possible information they know about the system. By this technique we came to know about following: -

1. How all process are performed.
2. How should system work.
3. This gives idea how system should be developed to perform different task.

### **• Record review:**

This technique is used to review the records, which they maintain. By this we can understand how entry should be done in each process. We saw all the entry, which they have already entered in the different register, which they maintain and also saw the reports they have generated. This give idea about how entry is done and verified in register. Through this we came to know about following: -

1. How record entry should be done in each process.
2. How reports are generated for different activity they perform.

## **Requirement Analysis**

Today life is very fast and work with the computer is speedy. The existing system was manually on paper. So it is time consuming as compared with our system a man cannot do work as fast as computer. In existing system paper work is more where as in our system on computer, so most of the work is done on computer and it provide facilities to change if any mistake occurred. So we can say that in existing system paper work is more. All the information is on paper in existing system so, there are possibilities of loss, theft, burning and damaging data on paper. Where as in computer system all data are saved and backup of data is also taken if user want. So there are less chances of data loss then the existing system. Existing system is inconvenient for user because it cannot give fast and proper information in proper time and it take long time to give information to the user. In our system the information is generated very quickly and prepared accordingly to the user request. Computer system provide very easy and flexible report generation whereas report generation on paper is time consuming and it is difficult to change if any mistake occurred in between while in computerized system reports are generated automatically.

## **Proposed System**

In the proposed car rental system, we use the internet to provide the user to book the car on rent from home. The user can book the car of his choice on rent from our system. This project will also display the status of the cars booked by user. If a user wants he/she can cancel the booking of the car incase he likes another car. The information will be safe as it will need an ID and password to access the system. The car rental system will also maintain the user data on the system where he can update the information when needed.

## **Scope**

As this is a generic software it can be used by a wide variety of outlets to automate the process of manually maintaining the information and records related.

## **Objectives of System**

It is a system design especially for large, premium and small car rental business. The car rental system provides complete functionality of listing and booking car. In this system, Tourism and Travelling facilities also provide.

## **User Requirements**

### **➤ HARDWARE REQUIREMENT**

- Client side:

<b>RAM</b>	512 MB
<b>Hard disk</b>	10 GB
<b>Processor</b>	1.0 GHz

- Server side:

<b>RAM</b>	1 GB
<b>Hard disk</b>	20 GB
<b>Processor</b>	2.0 GHz

### **➤ Software Requirements**

- Client side:

<b>Web Browser</b>	Google Chrome or any compatible browser
<b>Operating System</b>	Windows or any equivalent OS

- Server side:

<b>Web Server</b>	APACHE
<b>Server side Language</b>	PHP
<b>Database Server</b>	MYSQL
<b>Web Browser</b>	Google Chrome or any compatible browser
<b>Operating System</b>	Windows or any equivalent OS

## ANALYSIS AND DESIGN

### System Flow Chart

## **ER DIAGRAM**

The Entity-Relationship (ER) model was originally proposed by Peter in 1976 [Chen76] as a way to unify the network and relational database views. Simply stated the ER model is a conceptual data model that views the real world as entities and relationships. A basic component of the model is the Entity-Relationship diagram which is used to visually represent data objects. Since Chen wrote his paper the model has been extended and today it is commonly used for database design for the database designer, the utility of the ER model is:

- It maps well to the relational model. The constructs used in the ER model can easily be transformed into relational tables.
- It is simple and easy to understand with a minimum of training. Therefore, the model can be used by the database designer to communicate the design to the end user.
- In addition, the model can be used as a design plan by the database developer to implement a data model in specific database management software.

### **• ER Notation**

There is no standard for representing data objects in ER diagrams. Each modeling methodology uses its own notation. The original notation used by Chen is widely used in academics texts and journals but rarely seen in either CASE tools or publications by non-academics. Today, there are a number of notations used; among the more common are Bachman, crow's foot, and IDEFIX.

All notational styles represent entities as rectangular boxes and relationships as lines connecting boxes. Each style uses a special set of symbols to represent the cardinality of a connection. The notation used in this document is from Martin. The symbols used for the basic ER constructs are:

1. **Entities** are represented by labeled rectangles. The label is the name of the entity. Entity names should be singular nouns.
2. **Relationships** are represented by a solid line connecting two entities. The name of the relationship is written above the line. Relationship names should be verbs
3. **Attributes**, when included, are listed inside the entity rectangle. Attributes which are identifiers are underlined. Attribute names should be singular nouns.
4. **Cardinality** of many is represented by a line ending in a crow's foot. If the crow's foot is omitted, the cardinality is one.

## UML Diagram

### ➤ Use Case Diagrams

**Use case Diagram:** A Use case is a description of set of sequence of actions. Graphically it is rendered as an ellipse with solid line including only its name. Use case diagram is a behavioral diagram that shows a set of use cases and actors and their relationship. It is an association between the use cases and actors. An actor represents a real-world object. Primary Actor – Sender, Secondary Actor Receiver.

Level 1 DFD for car rental system

## **DATABASE DESIGN**

The data in the system has to be stored and retrieved from database. Designing the database is part of system design. Data elements and data structures to be stored have been identified at analysis stage. They are structured and put together to design the data storage and retrieval system.

A database is a collection of interrelated data stored with minimum redundancy to serve many users quickly and efficiently. The general objective is to make database access easy, quick, inexpensive and flexible for the user. Relationships are established between the data items and unnecessary data items are removed. Normalization is done to get an internal consistency of data and to have minimum redundancy and maximum stability. This ensures minimizing data storage required, minimizing chances of data inconsistencies and optimizing for updates. The MS Access database has been chosen for developing the relevant databases.

### **➤ Admin:**

<b>Table Name</b>	Admin
<b>Description</b>	This table is store information about Admin
<b>Primary Key</b>	id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store Admin id
2	UserName	varchar(100)	Not Null	It is store admin user name
3	Password	varchar(100)	Not Null	It is store the password of Admin
4	updationDate	timestamp	NotNull	It is store the profile updating date
5	email	varchar(50)	Not Null	It stores the mail id of admin

## ➤ User Registration:

<b>Table Name</b>	tblusers
<b>Description</b>	This table is provide the information about User registration
<b>Primary Key</b>	Id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is used store User id
2	FullName	varchar(120)	Null	It is used store User name
3	EmailId	varchar(100)	Null	It is used to store email address of User
4	Password	varchar(100)	Null	It is used to store Password
5	ContactNo	char(11)	Null	It is used to store Contact no of user
6	dob	varchar(100)	Null	It is used to store the Birthdate
7	Address	varchar(255)	Null	It is used to store Address
8	City	varchar(100)	Null	It is used to store city
9	Country	varchar(100)	Null	It is used to store country name
10	Adhaarcard	Varchar(120)	Not Null	It is used to store adhharcard image of user
11	RegDate	timestamp	CURRENT_TIMESTAMP	It is used to store CURRENT_TIMESTAMP
12	UpdationDate	timestamp	Null	It is used to store updation date

## ➤ Brands Table:

<b>Table Name</b>	tblbrands
<b>Description</b>	This table is provide the information about Car brands
<b>Primary Key</b>	Id

Foreign Key	
-------------	--

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store brand id
2	BrandName	varchar(120)	Not Null	It is store Brand name
3	CreationDate	timestamp	CURRENT_TIMESTAMP	It is store brand creation date
4	UpdationDate	timestamp	NotNull	It is store brand updation date

#### ➤ Contact us details Table:

<b>Table Name</b>	tblcontactusinfo
<b>Description</b>	This table is provide the contact information at website
<b>Primary Key</b>	id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	Id	Int	Primary Key	It is id of the record
2	Address	tinytext	Null	It is store name of the company
3	EmailId	varchar(255)	Null	It is store of the company email
4	ContactNo	char(11)	Null	It is store of the company contact no

➤ **Enquiry Table:**

<b>Table Name</b>	tblcontactusquery
<b>Description</b>	This table will store the information of car enquiry of user
<b>Primary Key</b>	Id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store enquiry id
2	name	varchar(100)	Null	It is store user
3	EmailId	varchar(120)	Null	It is store email id
4	ContactNumber	char(11)	Null	It is store contact no for user
5	Message	longtext	Null	It is store user message for enquiry
6	PostingDate	timestamp	CURRENT_TIMESTAMP	It store enquiry date
7	status	int(11)	NotNull	It is store status 0 for read and 1 for read

➤ **Feedback Table:**

<b>Table Name</b>	tbltestimonial
<b>Description</b>	This table store information about feedback
<b>Primary Key</b>	F_Id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store feedback id
2	UserEmail	varchar(100)	Not Null	It is store user email
3	Testimonial	mediumtext	Not Null	It is store feedback
4	PostingDate	timestamp	NotNull	It is store posting date of feedback
5	status	int(11)	NotNull	It is store status(0 for inactive and 1 active)

## ➤ Pages Content Table:

<b>Table Name</b>	tblpages
<b>Description</b>	This table store information about website pages
<b>Primary Key</b>	Id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store page id
2	PageName	varchar(255)	Null	It is store page name
3	type	varchar(255)	Not Null	It is store page type
4	detail	longtext	Not Null	It is store pages info

➤ **Subscriber Table:**

<b>Table name</b>	tblsubscribers
<b>Description</b>	This table store information of the subscribers
<b>Primary key</b>	id
<b>Foreign key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store subscriber id
2	SubscriberEmail	varchar(120)	Null	It is store subscriber email is
3	PostingDate	timestamp	Null	It is store subscription date

➤ **Vehicles Info Table:**

<b>Table Name</b>	tblvehicles
<b>Description</b>	This table is provide the information about cars
<b>Primary Key</b>	Id
<b>Foreign Key</b>	-

Sr. No	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store User id
2	VehiclesTitle	varchar(150)	Null	It is store vehicle title
3	VehiclesBrand	int(11)	Null	It is store vehicle brand id
4	VehiclesOverview	longtext	Null	It is store vehicle overview
5	PricePerDay	int(11)	Null	It is store vehicle rent perday
6	FuelType	varchar(100)	Null	It is store fuel type of vehicle
7	ModelYear	int(6)	Null	It is store model year of vehicle
8	SeatingCapacity	int(11)	Null	It is store seating capacity of vehicles
9	Vimage1	varchar(120)	Null	It is store vehicle image 1
10	Vimage2	varchar(120)	Null	It is store vehicle image 2

11	Vimage3	varchar(120)	Null	It is store vehicle image 3
12	Vimage4	varchar(120)	Null	It is store vehicle image 4
13	Vimage5	varchar(120)	Null	It is store vehicle image 5
14	AirConditioner	int(11)	Null	It is store availability of air conditioner in vehicle
15	PowerDoorLocks	int(11)	Null	It is store availability of power door locks in vehicle
16	AntiLockBrakingSystem	int(11)	Null	It is store availability of Anti lock Braking System in vehicle
17	BrakeAssist	int(11)	Null	It is store availability of Brake Assist in vehicle
18	PowerSteering	int(11)	Null	It is store availability of Power steering in vehicle
19	DriverAirbag	int(11)	Null	It is store availability of Driver Airbag in vehicle
20	PassengerAirbag	int(11)	Null	It is store availability of Passenger airbag in vehicle
21	PowerWindows	int(11)	Null	It is store availability of Power windows in vehicle
22	CDPlayer	int(11)	Null	It is store availability of CD Player in vehicle
23	CentralLocking	int(11)	Null	It is store availability of Central locking in vehicle
24	CrashSensor	int(11)	Null	It is store availability of crash sensor in vehicle
25	LeatherSeats	int(11)	Null	It is store availability of leather seats in vehicle
26	RegDate	timestamp	Null	It is store vehicle creation date
27	UpdationDate	timestamp	Null	It is store vehicle updation date

➤ **Booking table:**

<b>Table Name</b>	tblbooking
<b>Description</b>	This table is provide the information about booking
<b>Primary Key</b>	<u>Id</u>
<b>Foreign Key</b>	-

Sr. No.	Field Name	Data type(Size)	Constraints	Description
1	id ( <i>Primary</i> )	int(11)	Primary Key	It is store booking id
2	BookingNumber	bigint(12)	Null	It is store Booking Number
3	userEmail	varchar(100)	Null	It is store User email
4	VehicleId	int(11)	Null	It is store vehicle id
5	FromDate	varchar(20)	Null	It is store booking from date
6	ToDate	varchar(20)	Null	It is store booking To date
7	message	varchar(255)	Null	It is store message
8	Status	int(11)	Null	It is store confirmation and cancellation status
9	PostingDate	timestamp	Null	It is store Booking date

## TESTING

No	Data input	Excepted Output	Actual Output	Pass / Fail
1	All files are empty	Error message: *indicates compulsory field*	Error message: *indicates compulsory field*	Pass
2	Email	Error message: Invalid Email-address	Error message: Invalid Email-address	Pass
3	Password and confirm password	Error message: Both Password does not match	Error message: Both Password does not match	Pass
4	Login	Login to the system should be try with the login assigned by the admin and the correct password	Login should be successful and the user should enter into the system	Fail
		The System give an error and denied from the Login.	Login should fail with an error ' <b>Invalid Details</b> '	Pass
5	User	Login should be allow and admin get Admin home page.	Login successfully and admin get its admin home page	Pass
		Login should be allow and Travel admin get Travel admin home page.	Login successfully and Travel admin get its Travel admin home page	Pass
		Login should be allow and User get Visitor side User page.	Login successfully and User gets its user page.	Pass

- **User Profile**

The screenshot shows a web browser window with four tabs open. The active tab is 'localhost/carrental/profile.php'. The page header includes a logo for 'Car Rental Portal', support information ('FOR SUPPORT MAIL US: info@gmail.com' and 'SERVICE HELPLINE CALL US: 08888888888'), and a welcome message 'Welcome to car rental system'. A navigation bar at the top has links for 'HOME', 'ABOUT US', 'CAR LISTING', 'FAQS', and 'CONTACT US'. A dropdown menu for 'GANESH TIKAR' is visible. Below the header is a banner with a car image and the text 'Your Profile'. The breadcrumb navigation shows 'Home > Profile'. The main content area displays a user profile for 'Ganesh tikar' with a profile picture of a green car and the text 'Autospot'.

This screenshot shows the Windows taskbar. The search bar contains the text 'Type here to search'. To the right of the search bar are icons for various applications: File Explorer, Edge, Firefox, File Manager, Mail, Photos, and Google Chrome. On the far right of the taskbar, it shows the date and time as '9/28/2020 10:35 PM'.

The screenshot shows a web browser window with four tabs open. The active tab is 'localhost/carrental/profile.php'. The left sidebar has links for 'Profile Settings' (which is highlighted), 'Update Password', 'My Booking', 'Post a Testimonial', 'My Testimonials', and 'Sign Out'. The main content area is titled 'GENERAL SETTINGS' and shows a success message 'SUCCESS Profile Updated Successfully'. It displays the user's registration details: 'Reg Date - 2020-09-14 17:07:14' and 'Last Update at - 2020-09-28 22:35:45'. Below these are input fields for 'Full Name' (Ganesh tikar), 'Email Address' (ganesh@gmail.com), 'Phone Number' (07057393255), and 'Date of Birth (dd/mm/yyyy)' (2020-09-15). There is also a text area for 'Your Address' containing 'SR.NO 43,PATHARE THUBE NAGAR,CHANDANNAGAR,PUNE14'. At the bottom, there are fields for 'Country' (PUNE) and 'City'. The bottom of the screen shows the Windows taskbar with the same application icons as the previous screenshot, and the date and time as '9/28/2020 10:36 PM'.

**Waiting for approval**

The browser's taskbar at the bottom shows various pinned icons and the system clock indicating 10:44 PM on 9/28/2020.

- **Detail of Vehicle**

The screenshot shows a web browser window with multiple tabs open, displaying a car rental system. The main content area features a large image of a blue Maruti Suzuki Wagon R from three different angles. Above the image, the text "Welcome to car rental system" is displayed. Below the image, the vehicle model "Maruti , Maruti Suzuki Wagon R" is shown, along with its price "₹600 Per Day". A "Share" button with social media icons is visible. The browser's address bar shows the URL "localhost/carrental/vehical-details.php?vhid=1". The Windows taskbar at the bottom includes icons for search, calendar, settings, and various applications.

This screenshot shows the same car rental system interface as the previous one, but with more detailed vehicle information. It includes a "Vehicle Overview" section with details like year (2019), fuel type (Petrol), and seats (5). To the right, there is a "Book Now" form with fields for "From Date" and "To Date", a message area, and a "Book Now" button. The Windows taskbar at the bottom shows the date and time as 9/28/2020, 10:46 PM.

The screenshot shows a web browser window with four tabs open:

- Car Rental Portal | Page details
- Car Rental | Vehicle Details
- localhost / 127.0.0.1 / currental /
- Settings - Addresses and more

The main content area displays "Similar Cars" with two cards:

- Maruti , Maruti Suzuki Wagon R**  
₹600  
5 seats, 2019 model, Petrol
- Maruti , Maruti Suzuki Vitara Brezza**  
₹600  
5 seats, 2018 model, Petrol

At the bottom of the page, a Windows taskbar is visible with icons for File Explorer, Edge, File Explorer, Mail, File Explorer, Google Chrome, and Word.

- **About Us**

## About Us

We offer a varied fleet of cars, ranging from the compact. All our vehicles have air conditioning, power steering, electric windows. All our vehicles are bought and maintained at official dealerships only. Automatic transmission cars are available in every booking class. As we are not affiliated with any specific automaker, we are able to provide a variety of vehicle makes and models for customers to rent.

Our mission is to be recognised as the global leader in Car Rental for companies and the public and private sector by partnering with our clients to provide the best and most efficient Cab Rental solutions and to achieve service excellence.

## • Car Listing

The screenshot shows a web browser window with several tabs open, including 'Car Rental Portal | Page details', 'Car Rental Portal | Car Listing', 'localhost / 127.0.0.1 / carental /', and 'Settings - Addresses and more'. The main content area displays a search interface with dropdowns for 'Select Brand' and 'Select Fuel Type', and a 'Search Car' button. To the right, a blue Maruti Suzuki Wagon R is shown with details: \$600 Per Day, 5 seats, 2019 model, Petrol. Below it is a red Maruti Suzuki Vitara Brezza with similar details. On the left, a sidebar titled 'Recently Listed Cars' lists four vehicles: Maruti Suzuki Vitara Brezza (\$600 Per Day), Toyota Fortuner (\$3000 Per Day), Nissan Sunny 2020 (\$400 Per Day), and Nissan GT-R (\$2000 Per Day). The bottom of the screen shows a Windows taskbar with various icons and the date/time: 10:50 PM, 9/28/2020.

- **FAQ**

The screenshot shows a web browser window with tabs for 'Car Rental Portal | Page details', 'localhost / 127.0.0.1 / carental /', and 'Settings - Addresses and more'. The main content features a large banner image of a city street with cars and people. Overlaid on the banner is the word 'FAQs' in large white letters. Below the banner, a navigation bar includes links for HOME, ABOUT US, CAR LISTING, FAQS (which is highlighted in blue), and CONTACT US. A user profile 'GANESH TIKAR' is shown with a dropdown arrow. A search bar with the placeholder 'Search...' is also present. The bottom of the screen shows a Windows taskbar with the date/time: 10:50 PM, 9/28/2020.

## FAQs

- Q)Where is the address of your store ?  
A)Kharadi bypass,nagar road,pune-14.
- Q)Do you rent a driver along with the car?  
A)No we are sorry but we will be providing that facility soon.
- Q)Can I cancel my booking incase of emergency?  
A)Yes totally at on the day when u will receive car a confirmation call will be given to you .

The screenshot shows the same FAQ page layout as the previous one, featuring the 'FAQs' banner, navigation bar, and user profile. The bottom of the screen shows a Windows taskbar with the date/time: 10:51 PM, 9/28/2020.

- **Contact Us**

- **Empty field validations**

- **Password validations**

## **CONCLUSION**

The project is very feasible for people with basic computer knowledge so it is very user friendly. It helps in getting information about the car and its accessories and features. The project is ready to be used by the user and all the validations are checked and tested.

## **LIMITATIONS AND DRAWBACKS**

1. Driver rental facility not available.
2. User has to do the payment manually.
3. Auto bill generation not available if days extend.

## **FUTURE ENHANCEMENT**

1. Pop up the newly added car at the top.
2. The User payment for the current receipt of the payment.
3. Add the current project for booking easy.
